VERDEAXIS

COMPANY PROFILE · 2026

Closing the gap between regulation and reality.

Sustainability consulting for developers, manufacturers and listed companies in India and Asia.

Siddhant Jain, Founder · IGBC AP · EDGE Expert & Auditor
info@verdeaxis.com · +91 97255 23213 · verdeaxis.com

Hawa Mahal, Jaipur, 1799. 953 small windows pull breezes through the palace.

IIM Ahmedabad, 1974. Deep-set openings and brick walls that shade themselves.

WHERE WE START

India has always known how to build for heat.

Modern buildings can do the same, if the right decisions are made early, when they cost the least. We help you make those decisions with models and real numbers, then get the result certified.

AT A GLANCE

A new firm with seven years of practice behind it.

7+

years in practice

200+

certified projects worked on

6

countries

6

rating systems

WHAT WE DO

Green building certification, energy and daylight modelling, GHG accounting, LCA and ESG reporting.

WHO IT'S FOR

Developers, retail and logistics owners, manufacturers, listed companies, and their architects.

HOW WE WORK

Founder-led, with a network of senior specialists. Lean overheads keep fees down.

WHERE

Based in India. Project experience in Malaysia, France, Vietnam, Cambodia and Thailand.

India's rulebook is being rewritten.

MANDATE	WHAT IT REQUIRES	WHO IT AFFECTS	STATUS
Carbon Credit Trading Scheme	Emission-intensity targets for 490 plants in eight sectors. Shortfalls are covered by buying carbon credits.	Cement, aluminium, refining, textiles, paper	In force
BRSR Core	Assured ESG data from India's top 1,000 listed companies, with value-chain disclosures phasing in.	Listed companies and their suppliers	Top 1,000 by FY 2026-27
Building energy codes	ECBC is notified in 25 states and UTs. ECSBC 2024, its successor, adds sustainability requirements.	New commercial buildings	States adopting
Star rating for large buildings	Proposed: new buildings of 20,000 m² or more need at least a BEE 3-star rating or an approved equivalent.	Developers and owners	Draft, July 2026
Climate finance taxonomy	Will define which projects count as green for banks and investors. Buildings are a priority sector.	Anyone raising green finance	Draft framework
NDC 2035	47% lower emissions intensity than 2005 and 60% non-fossil power by 2035. Net zero by 2070.	Every sector	Submitted April 2026

Status as of October 2026. Sources: MoEFCC/PIB, SEBI, BEE and Ministry of Power, NITI Aayog, Ministry of Finance, UNFCCC.

Export markets and investors are asking for the same numbers.

2025

Malaysia starts ISSB-based climate reporting for its largest listed companies.

2026

EU CBAM's definitive phase: steel, aluminium and cement exporters must show verified emissions.

2027

First CBAM certificates bought for 2026 imports. Malaysia adds Scope 3 and assurance for the largest issuers.

2028

EU: all new public buildings must be zero-emission.

2030

EU: every new building must be zero-emission.

Over 40 jurisdictions are adopting ISSB climate reporting. Your buyers, lenders and parent companies will ask for numbers you can stand behind.

What a green building gives back to its owner.

FINANCIAL

24%

higher rents for green offices in Mumbai; 14–16% in Chennai and Hyderabad.

Extra build cost is typically under 2%.

Colliers-CREDAI 2025; IFC

MARKET

74%

of India's office leasing in H1 2025 went to green-certified buildings.

Occupancy runs 80–90%, against 65–85% for non-green stock.

ANAROCK 2025; Colliers

PEOPLE

26%

higher cognitive scores for people working in green-certified offices.

30% fewer sick-building symptoms, and better sleep.

Harvard COGfx study

SOCIETY

20%+

less energy, water and embodied energy, the EDGE minimum.

Lower bills for occupants, less pressure on the grid and water supply.

IFC EDGE standard

Four kinds of client, four different reasons to call.

01

Developers, retail and logistics

Pushed by: tenant requirements, green finance, energy codes and the proposed star-rating rule.

Certification under LEED, IGBC, EDGE or GRIHA, backed by energy and daylight models.

02

Manufacturers and exporters

Pushed by: EU CBAM, India's carbon market (CCTS) and buyers asking for product carbon data.

GHG inventories, product LCA, EPD support and green factory certification.

03

Listed companies and funds

Pushed by: BRSR Core assurance, investor questionnaires and GRESB.

Scope 1–3 inventories, BRSR and GRI reporting, and physical climate-risk studies.

04

Architects and MEP teams

Pushed by: credits that depend on simulation, on tight design timelines.

Energy, daylight and microclimate studies, delivered as part of your team.

Measure, certify, report.

01

Measure

Find the baseline and build the evidence.

- GHG inventory, Scope 1, 2 and 3
- Energy and daylight simulation
- Microclimate and climate-risk studies
- LCA, EPDs, CBAM and CCTS data

02

Certify

Take the project through to award.

- LEED, EDGE, IGBC and GRIHA
- WELL and Fitwel
- ECBC, ECSBC and BEE star ratings
- Reviewer queries and appeals

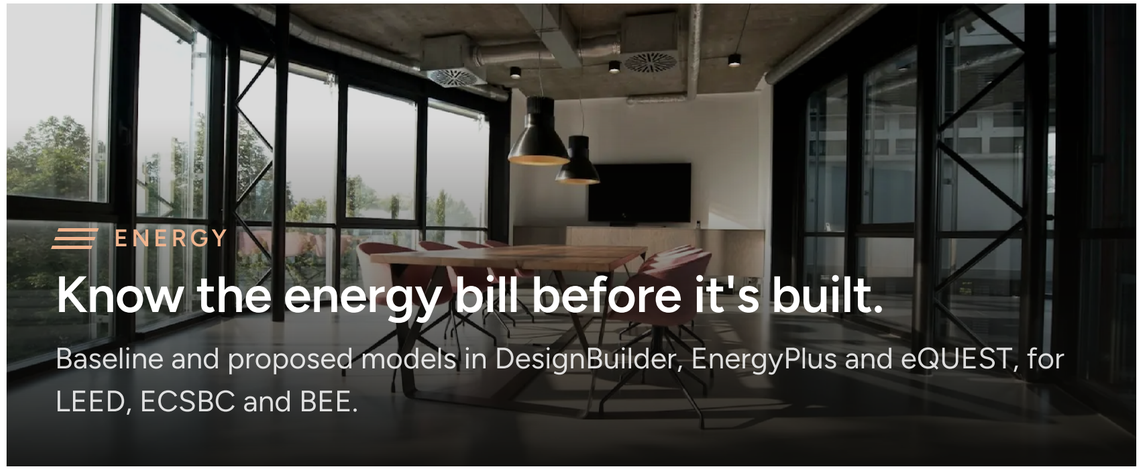
03

Report

Show investors and regulators the numbers.

- BRSR Core and BRSR
- GRI, CDP and TCFD
- ESG strategy and roadmaps
- SBTi target-setting support

We test the design in a model before anyone builds it.



ENERGY

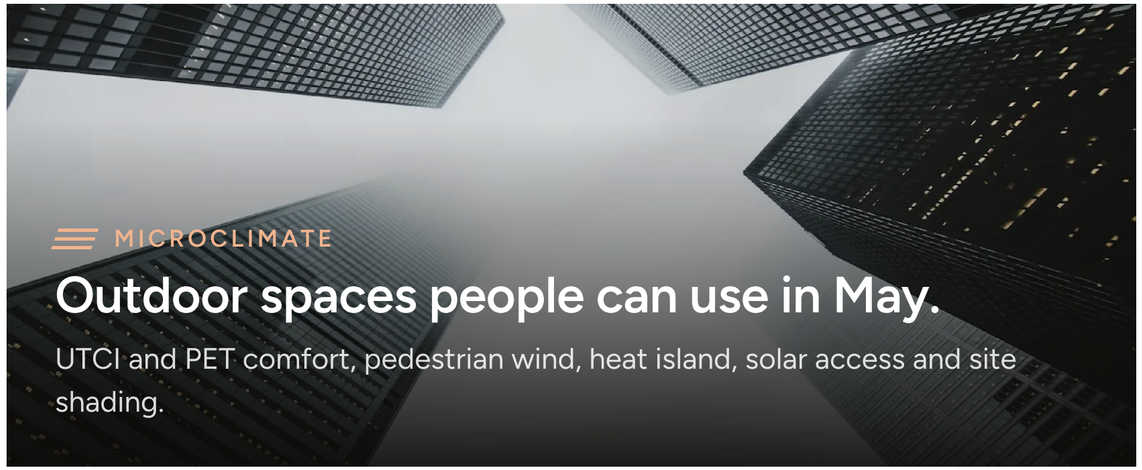
Know the energy bill before it's built.

Baseline and proposed models in DesignBuilder, EnergyPlus and eQUEST, for LEED, ECSBC and BEE.

DAYLIGHT

Bright rooms, without glare or heat.

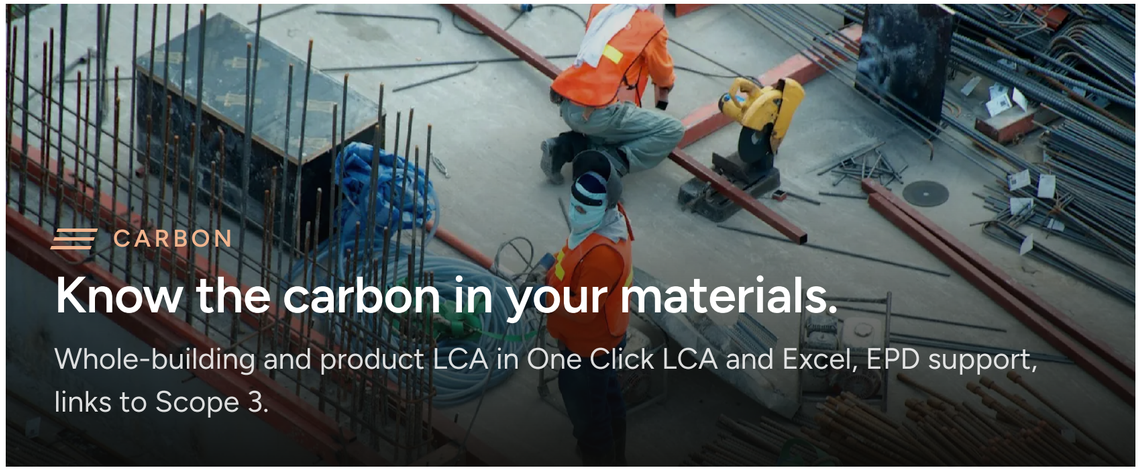
sDA, ASE, daylight factor and glare (DGP) studies, plus façade and shading options.



MICROCLIMATE

Outdoor spaces people can use in May.

UTCI and PET comfort, pedestrian wind, heat island, solar access and site shading.



CARBON

Know the carbon in your materials.

Whole-building and product LCA in One Click LCA and Excel, EPD support, links to Scope 3.

Every study ends with a one-page summary in plain English: what to change, what it costs and which credits it earns.

From a carbon inventory to a report investors accept.

SCOPE 1

Direct

Fuel burned on site, company vehicles, process emissions and refrigerant leaks.

SCOPE 2

Purchased energy

Grid electricity, steam, heating and cooling you buy.

SCOPE 3

Value chain

Purchased materials, transport, business travel, waste, and the use of what you sell.

01

Measure

GHG inventory to the GHG Protocol.

02

Set the target

Decarbonisation roadmaps and SBTi target-setting support.

03

Comply

CBAM and CCTS data for exporters and obligated plants.

04

Report

BRSR Core, GRI, CDP, TCFD and GRESB.

Six rating systems, chosen to fit the project.

SYSTEM	ISSUED BY	WHAT WE DELIVER
LEED	USGBC / GBCI	BD+C, Core and Shell, ID+C, O+M
EDGE	IFC / GBCI	Design and final certification, EDGE audits
IGBC	CII	New buildings, green factories, homes
GRIHA	GRIHA Council	GRIHA V-2019, Large Developments
WELL	IWBI	Health and wellbeing strategy
Fitwel	Center for Active Design	Occupant health certification

Not sure which system fits? That is what the free feasibility review is for.

FOUNDER CREDENTIALS

IGBC AP

Accredited Professional, CII-IGBC

EDGE Expert

IFC / GBCI

EDGE Auditor

GBCI

What we do that most consultants don't.

01

Market the building

Certification story for brochures, signage and sales teams, plus the press release and plaque launch.

02

Help lease and sell it

One-page green fact sheets and talking points that brokers, tenants and buyers understand.

03

Unlock green finance

Documentation for green loans and bonds, matched to what your lender needs.

04

Find the incentives

We check which state and city benefits your site qualifies for, such as extra FAR or fee rebates.

05

Keep it performing

A 12-month check of real energy and water use against the model, and fixes where they drift.

06

Show progress live

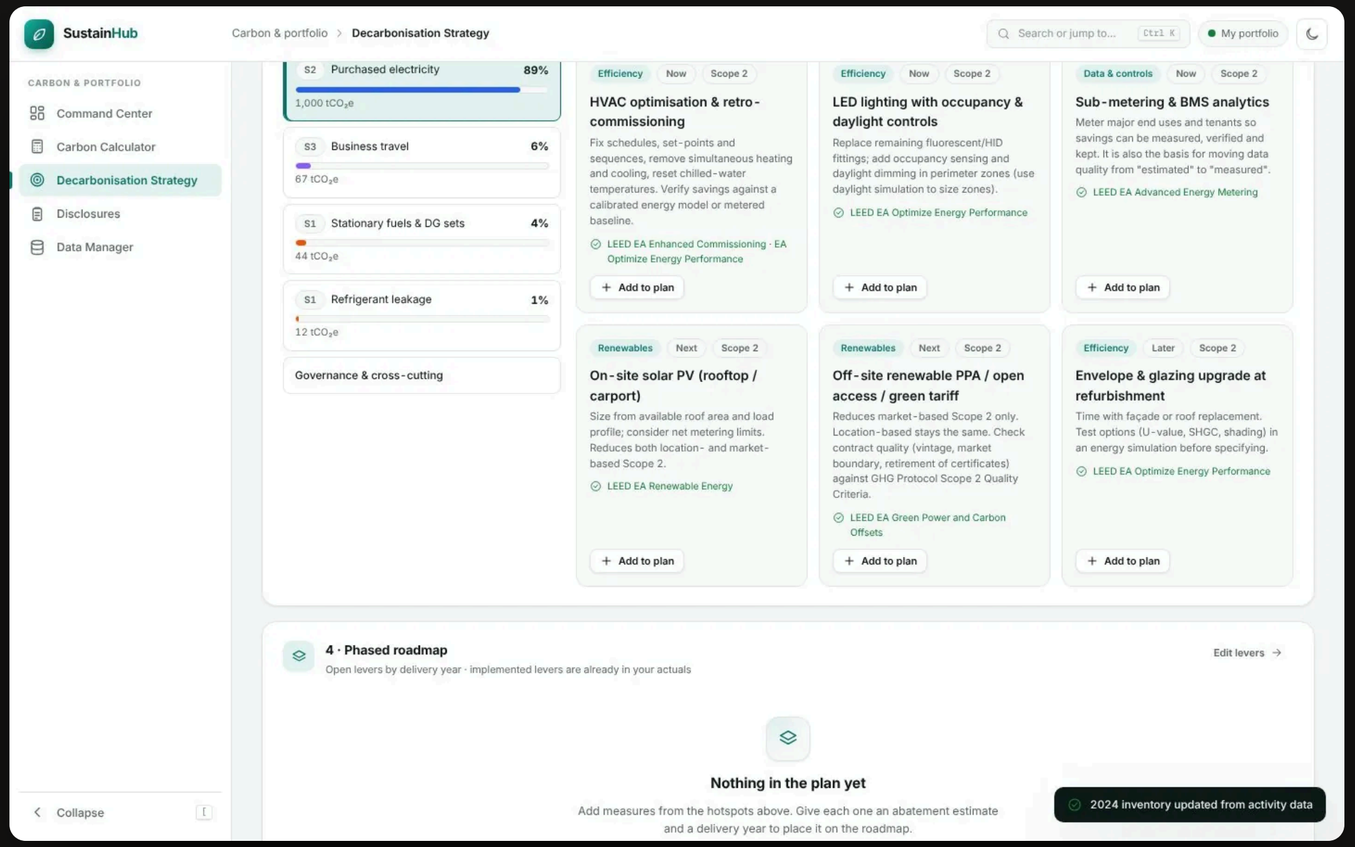
A shared online tracker, so you can see every credit's status without asking.

OUR PLATFORM

SustainHub. Every number in one place.

Our own workspace for carbon, certification and LCA, so clients see live numbers instead of waiting for a report.

- Scope 1, 2 and 3 calculator with official CEA and DESNZ factors
- Decarbonisation strategy with SBTi-style targets and a cost curve
- Report-ready tables for GHG Protocol, GRI 305, BRSR and IFRS S2
- Certification portfolio and building LCA in the same workspace



SustainHub strategy screen. Screen shows sample data.

03 · MEET THE FOUNDER

Siddhant Jain

Founder and Principal Consultant · IGBC AP · EDGE Expert & Auditor

"Certification kept being left to the end, after the big decisions were already made. We work the other way round: model first, decide with numbers, then certify what actually gets built."

Over seven years I've worked on more than 200 certified green building projects, from retail stores to logistics parks. And if a certification isn't worth it for your project, I'll tell you.

The experience behind VERDEAXIS.

CERTIFICATION

- 200+ certified green building projects in India and Malaysia
- Retail, offices, stores, logistics parks and industry
- LEED, EDGE, IGBC, GRIHA, WELL and Fitwel

CARBON AND REPORTING

- GHG reporting for multinational organisations
- Decarbonisation roadmaps to meet climate targets
- GRESB, GRI Standards and the UN SDGs

MODELLING

- Energy, daylight and microclimate in DesignBuilder and EnergyPlus
- Building and product LCA in One Click LCA and Excel
- Physical climate-risk assessments

TOOLS

`DesignBuilder` `EnergyPlus` `eQUEST` `One Click LCA` `Excel-based carbon models` `SustainHub`

Selected projects the founder has worked on.

PROJECT	LOCATION	SCOPE	NOTES
Green building portfolio	India and Malaysia	Multiple rating systems	200+ certified projects
Commercial campus	Gandhinagar, India	LEED v4.1 O+M	Targeting Gold
28-floor tower	Ho Chi Minh City, Vietnam	LEED BD+C v4	Core and Shell
Pet food facilities	France	LEED BD+C v4	Two industrial sites
Rice milling factory	Cambodia	EDGE v3.1	Final certification
Industrial portfolio	Thailand	ESG and GHG, Scope 1–3	GRESB-aligned reporting
Industrial park	Samut Sakhon, Thailand	Physical climate risk	WRI, NASA and Fathom data

Worked on by the founder as part of previous consultancy teams, before VERDEAXIS was formed. Client names withheld.

A network of specialists, not a pyramid of staff.

	TYPICAL FIRM	VERDEAXIS
Who does the work	Junior staff, reviewed later	Senior specialists, led by the founder
Overheads	Large office and idle bench	Lean and project-based
Your fee	Carries those overheads	Pays for the work itself
Capacity	Fixed headcount	Scales up or down with the project
Your contact	Account manager	The founder, directly

Lower overheads mean lower certification fees, without junior hand-offs.

Five steps from first call to certificate.

01

Scope

Brief, goals and the right rating system.

02

Analyse

Site visit, data audit, models and GHG baseline.

03

Document

Credit documents, drawings and model files.

04

Submit

Upload, reviewer queries and any appeals.

05

Certify

Award, handover, then re-certification and reporting.

What you can expect: a timeline agreed up front, a direct line to the founder, fees without big-firm overheads, and no surprise costs.

Start with a free review, or bring us in for the whole job.

START HERE

Feasibility review

Best for: any new project

Best-fit system, target rating and the main gaps. Free, with a written fee proposal after.

02

Certification, end to end

Best for: developers and owners

Registration, modelling, documents, submission and reviewer responses, through to award.

03

Simulation support

Best for: architects and MEP teams

Energy, daylight and microclimate studies, delivered to your design programme.

04

Carbon and ESG

Best for: manufacturers, listed firms

GHG inventories, LCA and EPDs, CBAM data and BRSR reporting.

NEXT STEP

Send us your drawings. We'll tell you what's possible.

The first feasibility review is free. You get:

- The rating system that fits your project, timeline and budget
- The main design and documentation gaps, before you register
- What modelling or carbon work you'll actually need
- A realistic timeline from kickoff to award
